

AMENDMENTS TO THE CLAIMS

1. (Previously Presented) A display device for displaying an image by using light of a light emitter, wherein:

the light emitter emits light having such a wavelength that affects a biorhythm, and
an intensity of the light having the wavelength which affects the biorhythm is increased or decreased at a higher rate than an intensity of light having another wavelength.

2. (Original) The display device according to Claim 1, wherein the intensity of the light having the wavelength is controlled based on time information.

3. (Original) The display device according to Claim 1, wherein the intensity of the light having the wavelength is controlled based on user instruction information set by a user.

4. (Original) The display device according to Claim 1, wherein the intensity of the light having the wavelength is controlled based on contents information indicating what type of program the image is.

5. (Previously Presented) The display device according to Claim 1, wherein the intensity of the light having the wavelength is controlled based on ambient brightness.

6. (Currently Amended) The display device according to ~~any one of Claims 1 to 5~~ Claim 1, comprising a complementary light emitter for emitting light whose color is substantially complementary to a color of the light having the wavelength.

7. (Previously Presented) The display device according to Claim 6, wherein a luminous intensity of the complementary light emitter is controlled in accordance with the intensity of the light having the wavelength.

8. (Previously Presented) A display device comprising an image display section for displaying an image, the image display section including pixels each of which has a plurality of light emitters, wherein:

the plurality of light emitters include a first light emitter for emitting light having such a wavelength that affects a biorhythm, and

a characteristic of a luminous intensity of the first light emitter with respect to a video signal inputted into the image display section is switched, so that an amount of light of the first light emitter is increased or decreased at a higher rate than another light emitter.

9. (Previously Presented) The display device according to Claim 8, wherein the light having the wavelength which affects the biorhythm is light having a dominant wavelength of 445 nm to 480 nm.

10. (Currently Amended) The display device according to Claim-~~8-or~~ 9, wherein the characteristic of the luminous intensity of the first light emitter with respect to the video signal is switched based on time information.

11. (Currently Amended) The display device according to Claim-~~8-or~~ 9, wherein the characteristic of the luminous intensity of the first light emitter with respect to the video signal is switched based on user instruction information set by a user.

12. (Currently Amended) The display device according to Claim-~~8-or~~ 9, wherein the characteristic of the luminous intensity of the first light emitter with respect to the video signal is switched based on contents information indicating what type of program the image is.

13. (Currently Amended) The display device according to Claim-~~8-or~~ 9, wherein the characteristic of the luminous intensity of the first light emitter with respect to the video signal is switched based on ambient brightness.

14. (Currently Amended) The display device according to ~~any one of Claims 8 to 13~~ Claim 9, wherein the plurality of light emitters include a second light emitter for emitting red light and a third light emitter for emitting green light.

15. (Currently Amended) The display device according to ~~any one of Claims 8 to 14~~ Claim 9, wherein the plurality of light emitters include a complementary light emitter for

emitting light whose color is substantially complementary to a color of light emitted by the first light emitter.

16. (Previously Presented) The display device according to Claim 15, wherein a luminous intensity of the complementary light emitter is controlled in accordance with the luminous intensity of the first light emitter.

17. (Currently Amended) The display device according to Claim 15 ~~or 16~~, wherein the complementary light emitter is disposed next to the first light emitter.

18. (Currently Amended) The display device according to ~~any one of Claims 8 to 17~~ Claim 9, wherein at least one of the plurality of light emitters is a light-emitting diode.

19. (Currently Amended) The display device according to ~~any one of Claims 8 to 17~~ Claim 9, wherein at least one of the plurality of light emitters is an electroluminescent light emitter.

20. (Previously Presented) A display device irradiating an image display section, which is for displaying an image, with light from a light source so as to cause the image display section to display the image, wherein:

the light source includes a first light emitter for emitting light having such a wavelength that affects a biorhythm, and

a luminous intensity of the first light emitter is switched so that an amount of light of the first light emitter is increased or decreased at a higher rate than another light emitter.

21. (Currently Amended) The display device according to Claims ~~20~~ 39, wherein the light source includes a second light emitter for emitting red light and a third light emitter for emitting green light.

22. (Currently Amended) The display device according to Claim ~~20 or 21~~ 39, wherein the light source includes a white light emitter for emitting white light.

23. (Cancelled)

24. (Cancelled)

25. (Currently Amended) The display device according to any one of Claims ~~20 to 24~~ 39, comprising a complementary light emitter for emitting light whose color is complementary to a color of light emitted by the first light emitter.

26. (Original) The display device according to Claim 25, wherein a luminous intensity of the complementary light emitter is controlled in accordance with the luminous intensity of the first light emitter.

27. (Currently Amended) The display device according to Claim 25 ~~or 26~~, wherein the complementary light emitter is disposed next to the first light emitter.

28. (Currently Amended) The display device according to ~~any one of Claims 20 to 24~~ Claim 39, comprising a phosphor for emitting light whose color is substantially complementary to a color of light emitted by the first light emitter.

29. (Currently Amended) The display device according to ~~any one of Claims 20 to 28~~ Claim 39, wherein at least one of the light emitters of the light source is a light-emitting diode.

30. (Currently Amended) The display device according to ~~any one of Claims 20 to 28~~ Claim 39, wherein at least one of the light emitters of the light source is an electroluminescent light emitter.

31. (Currently Amended) The display device according to ~~any one of Claims 20 to 30~~ Claim 39, wherein the luminous intensity of the first light emitter is controlled based on time information.

32. (Currently Amended) The display device according to ~~any one of Claims 20 to 30~~ Claim 39, wherein the luminous intensity of the first light emitter is controlled based on user instruction information set by a user.

33. (Currently Amended) The display device according to ~~any one of Claims 20 to 30~~ Claim 39, wherein the luminous intensity of the first light emitter is controlled based on contents information indicating what type of program the image is.

34. (Currently Amended) The display device according to ~~any one of Claims 20 to 30~~ Claim 39, wherein the luminous intensity of the first light emitter is controlled based on ambient brightness.

35. (Original) A display device irradiating an image display section, which is for displaying an image, with light from a light source so as to cause the image display section to display the image, the display device comprising:

a plurality of emission amount controlling means transmittances are different from each other in a wavelength band of 445 nm to 480 nm,

controlling of the plurality of emission amount controlling means causing an emission amount of the light from the light source to change for each wavelength band, so that the image display section is irradiated with the light.

36. (Original) A display device for displaying an image by using light of a light emitter, wherein:

the light emitter emits light having such a wavelength that affects a biorhythm, and

an intensity of the light having the wavelength is changed by selecting on a user's instruction a target control pattern from among a plurality of control patterns of controlling the

intensity of the light having the wavelength, the plurality of control patterns corresponding to times.

37. (Original) The display device according to Claim 36, wherein the plurality of control patterns are settable by the user.

38. (Original) A method for using a display device which displays an image by using light of a light emitter, wherein:

the light emitter emits light having such a wavelength that affects a biorhythm, and an intensity of the light having the wavelength is controlled, so that the biorhythm is regulated and the image is displayed.

39. (New) The display device according to Claim 20, wherein the light having the wavelength which affects the biorhythm is light having a dominant wavelength of 445 nm to 480 nm.

40. (New) A display device irradiating an image display section, which is for displaying an image, with light from a light source so as to cause the image display section to display the image, wherein:

the light source consists of white light emitter for emitting white light and a first light emitter for emitting light having such a wavelength that affects a biorhythm, and

a luminous intensity of the first light emitter is switchable independently of the white light emitter.

41. (New) The display device according to Claim 40, wherein the light having the wavelength which affects the biorhythm is light having a dominant wavelength of 445 nm to 480 nm.
